

New improved reinforced bearing

The new 24mm reinforced bearing for your AG Pin Carriages is of high quality with special high temp grease for long lasting. This European made bearing is specified by AG for this purpose specifically. This bearing is of even higher quality than the ones we have previously supplied, and with special sealing to protect the grease inside to evaporate. Due to high order volume we are now able to offer this bearing at very favorable price.

1. Viton seal instead of metal which will give the grease longer life time.
2. Surface black finish with better corrosion resistance.
3. Withstanding higher working temperature.
4. Life time improvement.
5. Same dimension and same AG part number as old reinforced bearings. **Part # 100192**

The double reinforced pin carriage we use as standard to day (108955). This carriage will take over for the one side reinforced type sold before

EUR 18.- / USD 20.- *

* Price per unit valid throughout 2018.
For orders over 300pcs we can grant 5% discount.

We strongly recommend using bearings from AG for reliable and long-lasting operation of the tent. Also, our previously sold reinforced bearing had customized specification even though the supplier part number did not fully reveal this information. Using non-original parts in the AG tent may increase the wear of the tent, and even cause severe failure and loss of production time.
